

Another FREE Forex strategy from [JamesForex.com](http://JamesForex.com)...

# The **SUPER 535** Forex Simple Trading Strategy...

Hey – it's James!

I'm going to assume you already know at least something about Forex.

So, rather than bore you with "how to setup your chart...", I'm just going to tell you exactly what you need on your chart.

Start with a clean chart and add:

- 5-Period Exponential Moving Average
- 35-Period Exponential Moving Average

Your chart should look something like this:

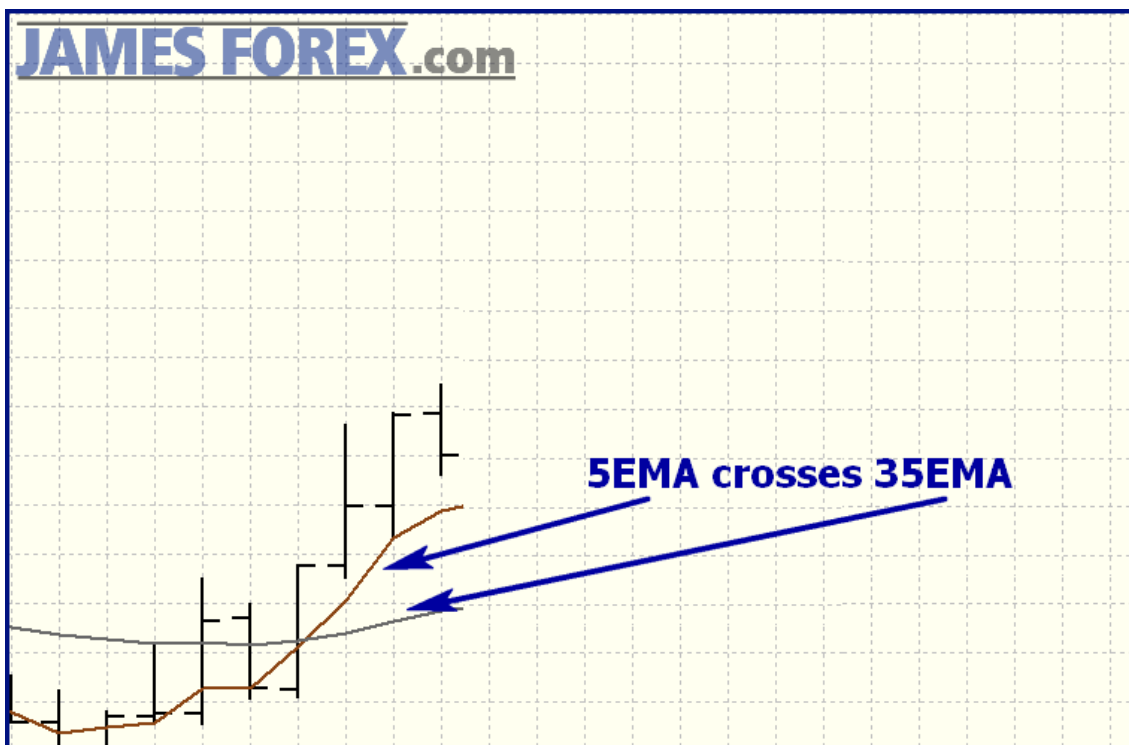

## Here's How To Trade It...

I'm only going to go through a **buy** setup here (a **sell** is exactly the same – but in the opposite direction!).

Now, this particular method is *optimised* for the 5-min timeframe – but, if you're already getting results in your trading, then go ahead and try it on other timeframes (you should find it will work well).

## STEP #1

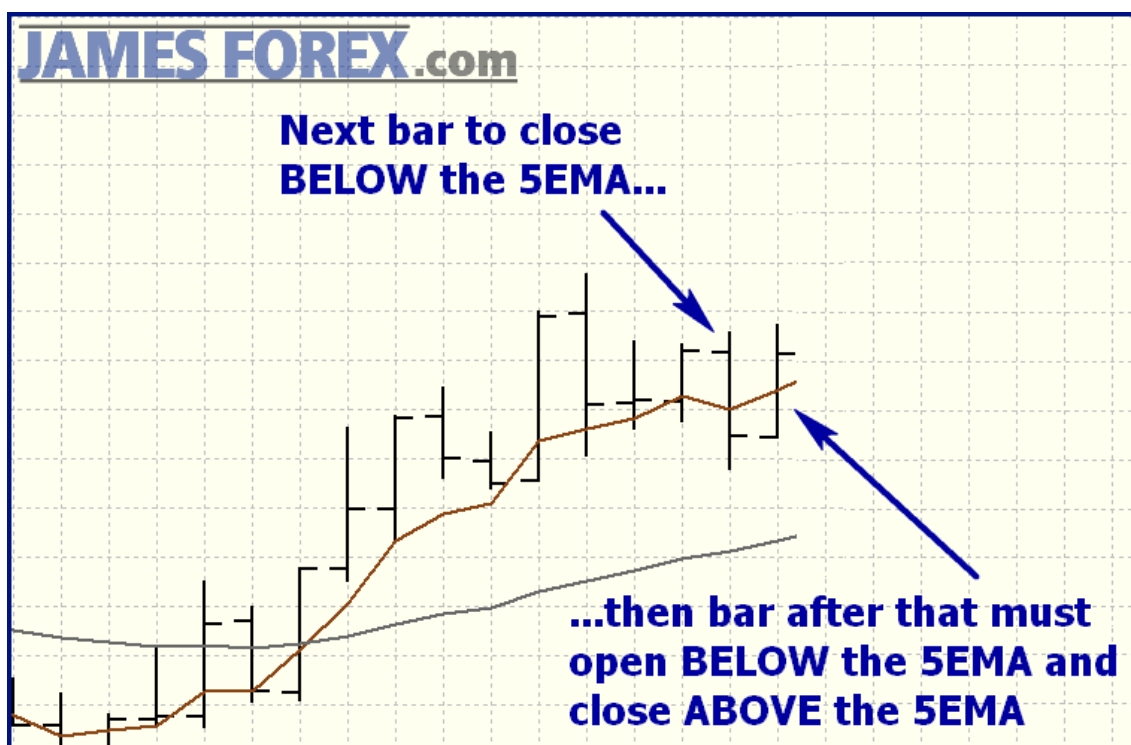

We wait for the **5ema** to cross *above* the **35ema**:

## STEP #2

Wait for the next bar to close *below* the 5ema...

...then the bar after to open below the 5ema and close above the 5ema:

## STEP #3

BUY when price **breaks the high** of that bar (and place your stoploss below the low).

Take profit of **10** or **20** pips (I know, sounds simple, but try it – you’ll get a high win rate as you get more and more get confident at it!):

## [ADVANCED] EXIT OPTION

Once you start getting more confident with this method, then I recommend that you start trying to grab some **big-run winners** (instead of just the 10 or 20 pips).

Take a look at the “example” chart I gave at the very beginning of this strategy when we were setting-up the charts... can you see the perfect trade there?

## Listen, Your Success Depends On This...

I know this is a *FREE* strategy I've given you.

And I know that many traders *assume* that if something is given away for free, then it must not be worth anything.

All I ask is that you give the **Strategy 535** your best shot, okay?

All the best,

**James**

**P.S.** One more tip... I highly recommend you try to trade just *one currency pair* at first (yes, I know it's boring, but you need to stay focused!)

**P.P.S.** Don't go for "big runs" during the Asian session (you won't get them most of the time)... to get bigger winners you need to be trading the London and US session.

**P.P.P.S.** One more thing... remember to keep checking your Inbox for emails from [James Forex](#) (I'm the only guy who sends you out tons of free Forex stuff... tells you the REAL truth about Forex... and provides **YOU** with rock-solid information!)

If you're not already on my exclusive FREE list then you can access it here...

Trading Foreign Exchange carries a high level of risk and may not be suitable for all investors. There is a possibility that you could sustain a loss of all or more of your investment therefore you should not invest money that you cannot afford to lose. You should be aware of all the risks associated with Foreign Exchange trading. This website, Four Figure Forex, and anyone associated with it, cannot be held responsible for any losses incurred. Trading foreign currencies is a challenging and potentially profitable opportunity for educated and experienced investors. However, before deciding to participate in the foreign equity market, you should carefully consider your investment objectives, level of experience and risk appetite. Most importantly, do not invest money you cannot afford to lose. There is considerable exposure to risk in any off-exchange foreign exchange transaction, including, but not limited to, leverage, creditworthiness, limited regulatory protection and market volatility that may substantially affect the price, or liquidity of a currency or currency pair. Moreover, the leveraged nature of foreign equity trading means that any market movement will have an equally proportional effect on your deposited funds. This may work against you as well as for you. The possibility exists that you could sustain a total loss of initial margin funds and be required to deposit additional funds to maintain your position. If you fail to meet any margin requirement, your position may be liquidated and you will be responsible for any resulting losses. To manage exposure, employ risk-reducing strategies such as 'stop-loss' or 'limit' orders. There are risks associated with utilizing an Internet-based trading system including, but not limited to, the failure of hardware, software, and Internet connection. This website, Four Figure Forex, and anyone associated with it, cannot be held responsible for communication failures or delays when trading via the Internet.
